

Hospital Medication Supply Continuity Guidance — Demo

Medication focus: Ceftriaxone

DEMONSTRATION DOCUMENT — SYNTHETIC OPERATIONAL CONTENT

Supply monitoring

During a documented shortage, supply teams should review current stock, consumption rate, projected coverage, replenishment lead time, and supplier availability.

Human review

Any candidate medication alternative remains subject to qualified pharmacist review. This demonstration document does not authorize autonomous therapeutic substitution.

Escalation

Operational escalation is appropriate when projected coverage is below the configured reorder horizon or when supplier lead time threatens continuity.

Traceability

Operational analyses should preserve the source document and page reference used by the workflow.
